

TRANSFORMING IDEAS INTO
innovative chemistries

Innovation. In our raw materials. In our solutions.

Kitchen Cleaners & Dish Detergents

FOUNDED in 1994, Vitech continues to lead the way in the development and marketing of unique chemistries. Vitech offers clients a wide range of raw materials including surfactants, acid replacement technologies, specialized polymers, fluorinated surfactants, fluorinated polymers, silicones and bacterial cultures. These chemistries are mainly used as components in cleaners.

OUR COMMITMENT is to provide our clients with innovative chemistries to meet their formulating challenges. We provide solutions through our raw materials, technical expertise and unique approach to problem solving. We focus on initiatives that maximize product performance, reduce formulation costs and minimize environmental impact.

Setting the standard for green products

OUR FOCUS is designing chemistries that meet or exceed current green standards without sacrificing profit or performance for our clients.

We can reduce or eliminate VOCs, glycol ethers, solvents, phenol ethoxylates, phosphates or other environmentally suspect components from our clients' products. Our application laboratories can test both our chemistries and the finished formulations to ensure they meet the desired green standards.

Many of our products are widely used in green cleaners and recognized for their superior performance. In addition, these products can be used to formulate cleaners that meet the requirements for Green Seal®, EPA's Design for the Environment (DfE), Carpet Rug Institute (CRI) and Canadian EcoLogo™.

By integrating cost, performance and environmental responsibility, we continue to set the standard in green cleaning.

WE PROVIDE SOLUTIONS Vitech's application laboratories perform extensive testing on our raw materials in finished formulations using state-of-the-art equipment. This ensures that our raw materials meet the performance, cost and environmental objectives defined by our clients for their intended end-use applications.

Hard Surface Cleaners & Degreasers

WE MEET MARKET DEMANDS At Vitech, we realize meeting project deadlines is critical. In today's fast-paced and dynamic environment, we know our clients are faced with time constraints and pressures to meet market demands. To alleviate some of these pressures, Vitech provides solutions with fast turn-around times.

WE CONSIDER THE POSSIBILITIES From dollar stores to industrial and institutional formulas, Vitech provides raw materials that meet our clients' formulation cost parameters. We consider ways to save our clients money: eliminating flammable solvents, thereby reducing insurance costs; providing formulations that work effectively at high dilutions; reducing use levels of ingredients while maintaining performance; improving the environmental, health & safety profiles; and reducing inventory carrying costs.

Empowering clients to help them achieve more

DEFINE THE NEED Key to Vitech's innovative approach is our ability to directly address client challenges. We discuss the client's specific requirements and together define a project. In our application laboratories, we examine the synergies achieved using our raw materials and use that knowledge to provide the best possible chemistries for them.

From dollar store to industrial & institutional formulas, we can provide raw materials that meet your target end formulation costs

Glass & Surface Cleaners

WE LISTEN so that we can be more than your supplier; our goal is to be your solution provider. At Vitech, we do not sell product for the sake of selling. Instead, we listen to your project requirements and let you determine how much, or how little, assistance you need from us to create the most cost-effective formulation that meets performance expectations. WE INNOVATE because we are committed to offering unique raw materials that will address your needs now – and into the future. This means we are constantly developing and refining our chemistries to help our clients. WE RESPOND by assisting clients in formulation design; by providing formulated samples to facilitate quick evaluation; by benchmarking a prototype against industry or ASTM test specifications and by providing documentation to support applications for environment-based certifications. And we do so in the most timely manner possible. WE DELIVER the best in raw materials to create high performance, competitively priced formulations. The benefits we offer are our way of maximizing value for our clients.

Cost-effective formulations
that meet performance
expectations

providing value,
high performance and
environmental benefits

Throughout Vitech's history, we have infused **innovation** into all aspects of our business. To us, innovation is more than a marketing term or the **creation** of a new product. It extends into the way we create **solutions** to meet challenges that range from the technical to the visionary. Innovation is the way we combine **chemistry** and **functionality**. Innovation is the way we approach problem solving. This is why we are the **technical source** for innovative solutions.
